

### **CUSTOMER TESTIMONIALS**

# HEADQUARTERS Dubuque, IA

"We've been using the FlowBelow Tractor AeroKit on over 800 trucks for over three years and have had an overall excellent experience. The system has helped to increase our fleet average fuel economy by approximately 2% and we consider it to be part of our standard tractor spec. On the maintenance side, our mechanics are very pleased with the wheel cover design which provides instant access to the wheel end. With over 250,000 miles on every FlowBelow unit we have in the fleet we have only had to replace a few components. When we need something, FlowBelow has always provided outstanding customer support. The decision to do business with FlowBelow has made a major positive impact on Hirschbach's business and we expect that to continue."

"We performed several fuel and durability tests with the FlowBelow Tractor AeroKit package. First, there was a third-party test that Texas A&M Transportation Institute performed using an MVT-owned International Pro-Star and Utility trailer. The results of that test was a 2.23% fuel savings. As a policy MVT always verifies third party testing with internal testing. The results of the internal testing were positive and in alignment with FlowBelow's fuel savings claims. Finally, after fuel validation we confirmed durability and driver acceptance with a group of trucks for over a year. In the end, we placed an order with FlowBelow for 1,200 Tractor AeroKits and are currently installed on 80% of our fleet.

Given our experience with the product I would highly recommend making the FlowBelow Tractor AeroKit a standard spec for any regional or OTR operation. There is no better wheel cover or complete system on the market that can help improve the aerodynamics around the wheels of the tractor. "

and we are always

"So many aero product manufacturers make robust claims, and we are always a bit skeptical of them. However, when the PIT Group backed up FlowBelow's fuel savings claims with real data, we trusted it. That turned out to be a good decision for our fleet, and we've been spec'ing FlowBelow AeroKits on all brands of Skyline trucks for many years. We don't see a heavy increase in maintenance expenses, while we do see improved fuel economy on the trucks that have the full FlowBelow AeroKit. The company is attentive and the product is solid. It's one thing I don't really ever have to worry about, so keeping them on our spec is an easy decision to make."

"We incorporated FlowBelow products about 2 years ago, and they have definitely helped us with our fuel economy and positively affected our bottom line. Our customers are looking for us to be a green fleet and to reduce our carbon footprint, so fuel economy is a big piece the puzzle for us. We meet customer expectations and we improve our profitability by increasing our miles per gallon with products like FlowBelow.

In addition to the proven aerodynamic benefits FlowBelow provides, their product is easy for our drivers. They can quickly maintain the equipment and check tire pressure, which also impacts fuel economy. The product has held up for us very well, and the support the team at FlowBelow provides allows us to have a great partnership.

I would say the product has been tried and tested. You need to try it yourself and see how it would benefit your fleet."

"Over the past decade, we have improved the fleet average fuel economy of Cooper Freight by over 3 miles per gallon. We decided to test FlowBelow Tractor AeroKit on a group of trucks. In order to be confident in the fuel savings we installed the product on a dedicated sample size of trucks and tracked performance for over a year to verify both fuel savings and durability. We confirmed that the fuel savings of the product for our fleet was approximately two-tenths of a mile per gallon. In addition, the drivers and mechanics are very pleased with the accessibility of the FlowBelow quick-release design. Going forward we spec FlowBelow on every new truck we purchase."

"We've been using the FlowBelow AeroKit and wheel covers on our trucks for some time now. We are already making a profit on the investment we made and the products have a long life ahead of them. The performance and durability is far better than what I expected and to my surprise, our drivers and mechanics actually like using the product. When I buy new trucks from my dealer, I spec them with FlowBelow."
